11.07× 0.6B
MAXIMUM BATCHING OPPORTUNITY
0.6B · median 4.62×

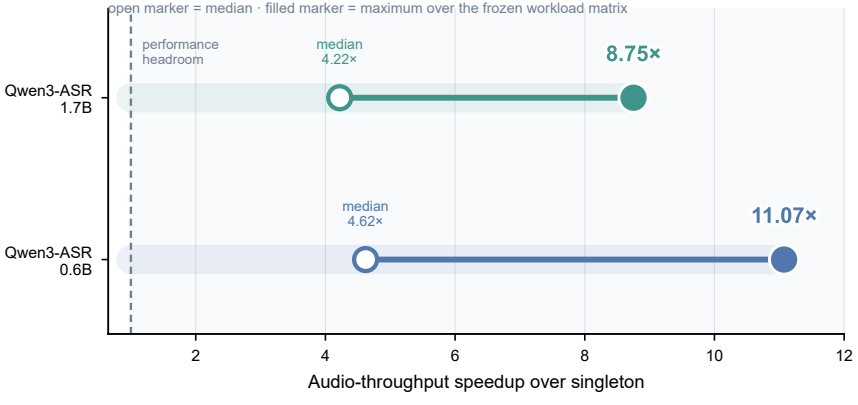

8.75× 1.7B
MAXIMUM BATCHING OPPORTUNITY
1.7B · median 4.22×

17 / 720
CROSS-SHAPE MISMATCHES
singleton repeat: 0 / 720

8 / 21
FEEDBACK-PROPAGATING PAIRS
feedback disabled: 0 / 21

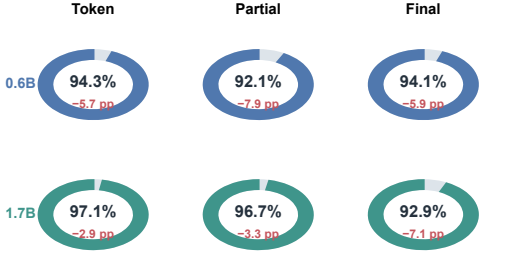

a Order-of-magnitude headroom is available

open marker = median · filled marker = maximum over the frozen workload matrix

b The fast path changes revision semantics

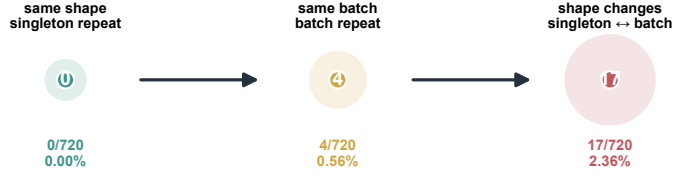

six exact-match gauges expose token-, partial-, and final-level deficits

red text = distance from deterministic singleton execution

c Controls isolate execution shape as the cause

circle area scales with observed mismatch count across 720 paired revision events

same job + greedy decode + stable singleton => execution shape is the remaining intervention

d Feedback is the causal propagation edge

fixed future audio; only the previous-text feedback path is intervened
